

# **EGRET/INTEGRAL cross-correlation studies: a few possible associations (and prospects for GLAST ?)**

J. B. Stephen, INAF-IASF Bologna

Five Years of INTEGRAL: Chia Laguna, (Cagliari), October 17<sup>th</sup> -19<sup>th</sup> 2007

# WHY EGRET/INTEGRAL-IBIS cross correlation?

**3<sup>rd</sup> IBIS survey Collected between October 2002 and April 2006**

**~24000 pointings → ~40 Ms exposure**

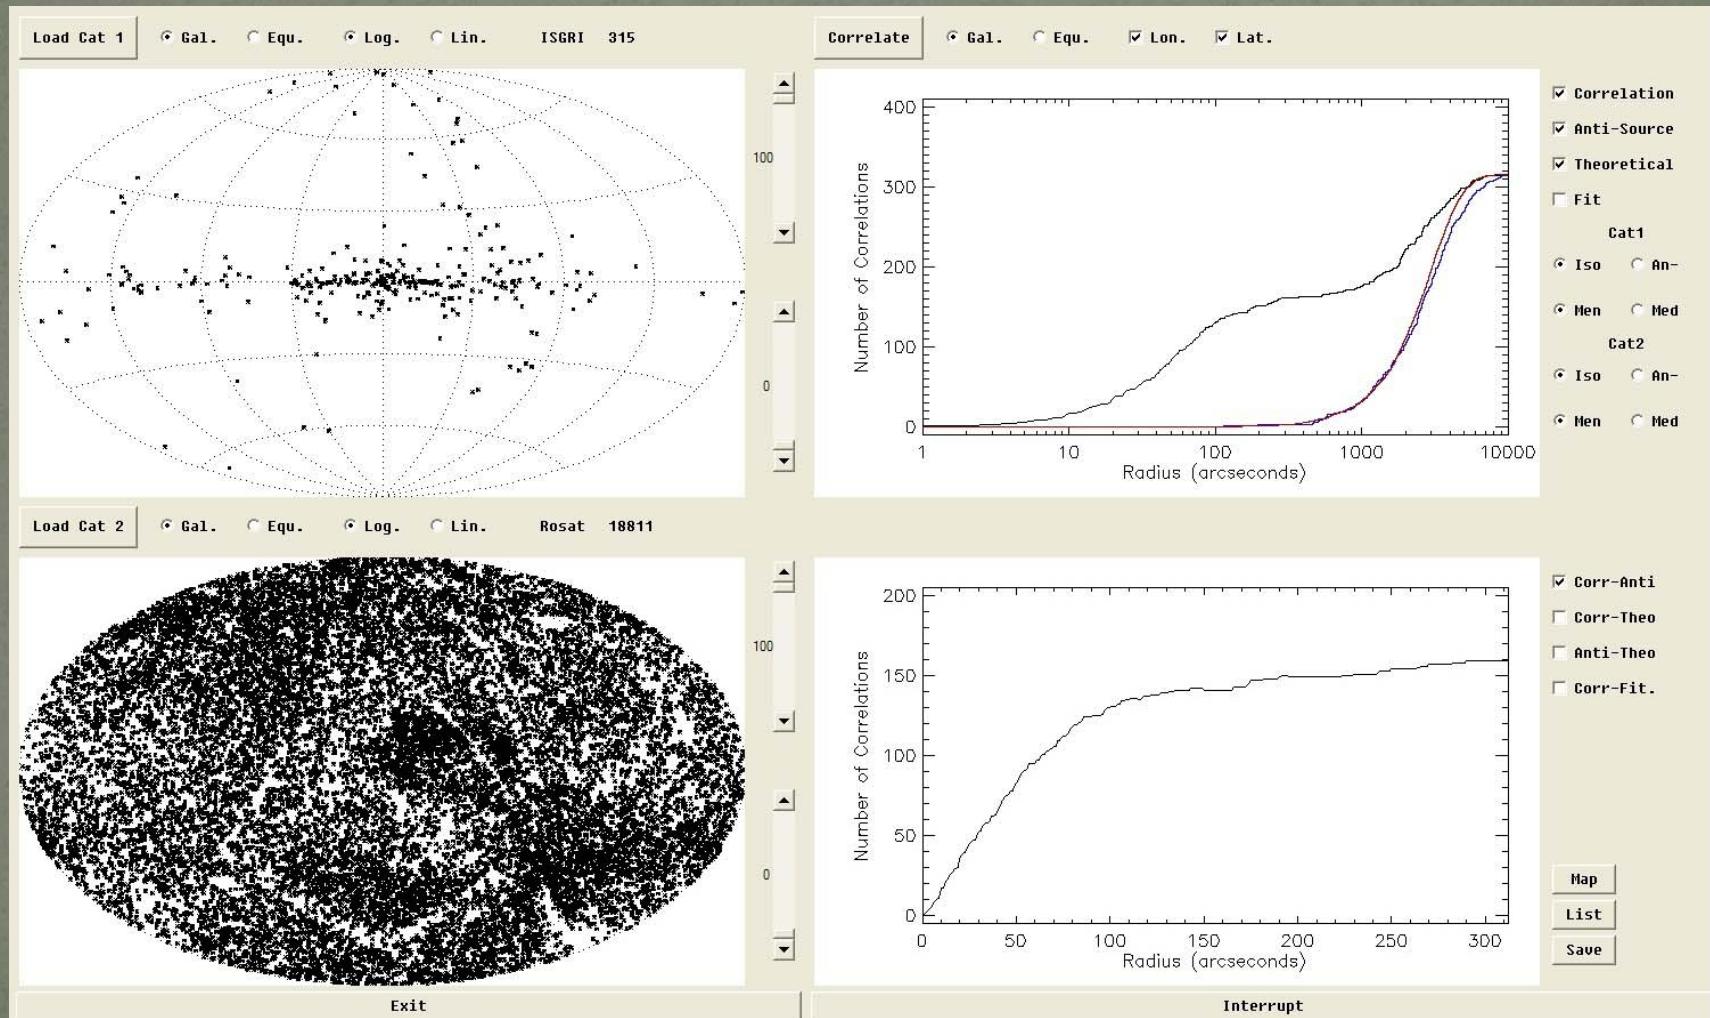

**sensitivity: ~1 mCrab (20-100 keV)**

**positional accuracy: 1' to 5'**

- 1) It gives information in an energy band close to EGRET band
- 2) It allows a full contemporaneous coverage of the entire EGRET error box
- 3) It provides good arcminute location and good sensitivity particularly on the galactic plane where identification is more problematic

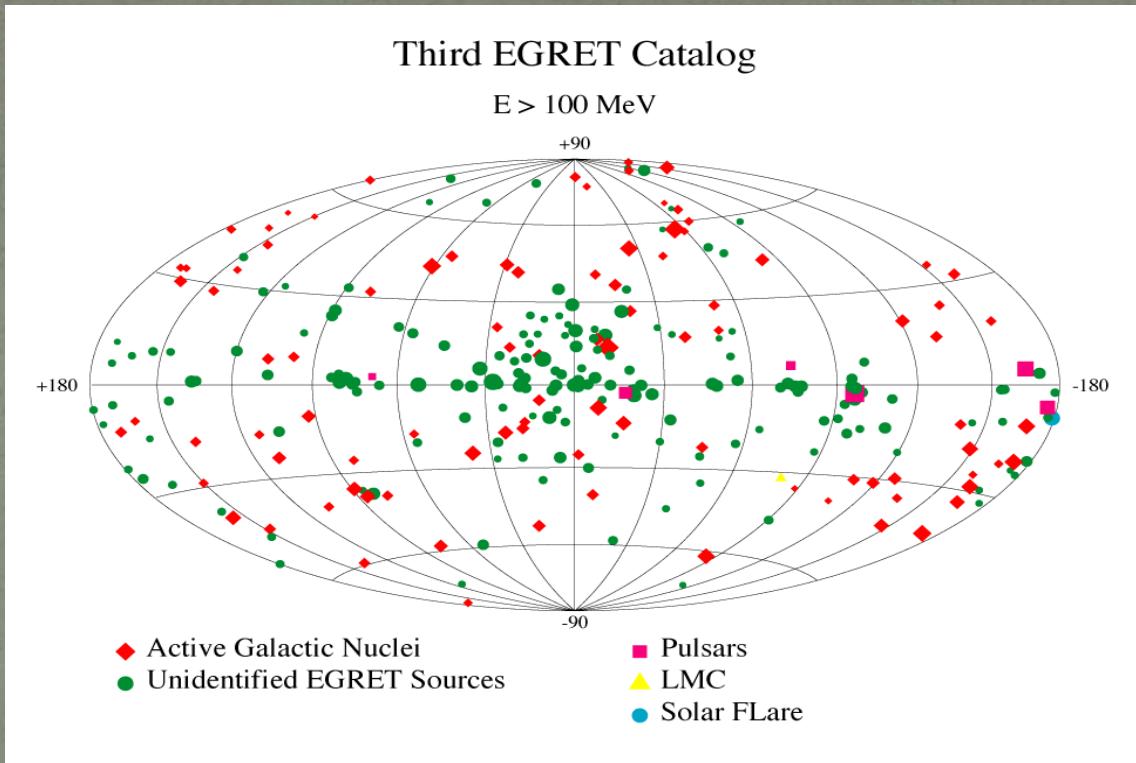

# WHY EGRET/INTEGRAL-IBIS cross correlation?

- following on from ISGRI/ROSAT results:

Strong correlation has led to the identification of many sources

# The 3rd EGRET catalogue

The 3<sup>rd</sup> EGRET catalogue comprises 271 sources.

101 were identified (mostly with Blazars, a few pulsars, LMC and a Solar Flare).

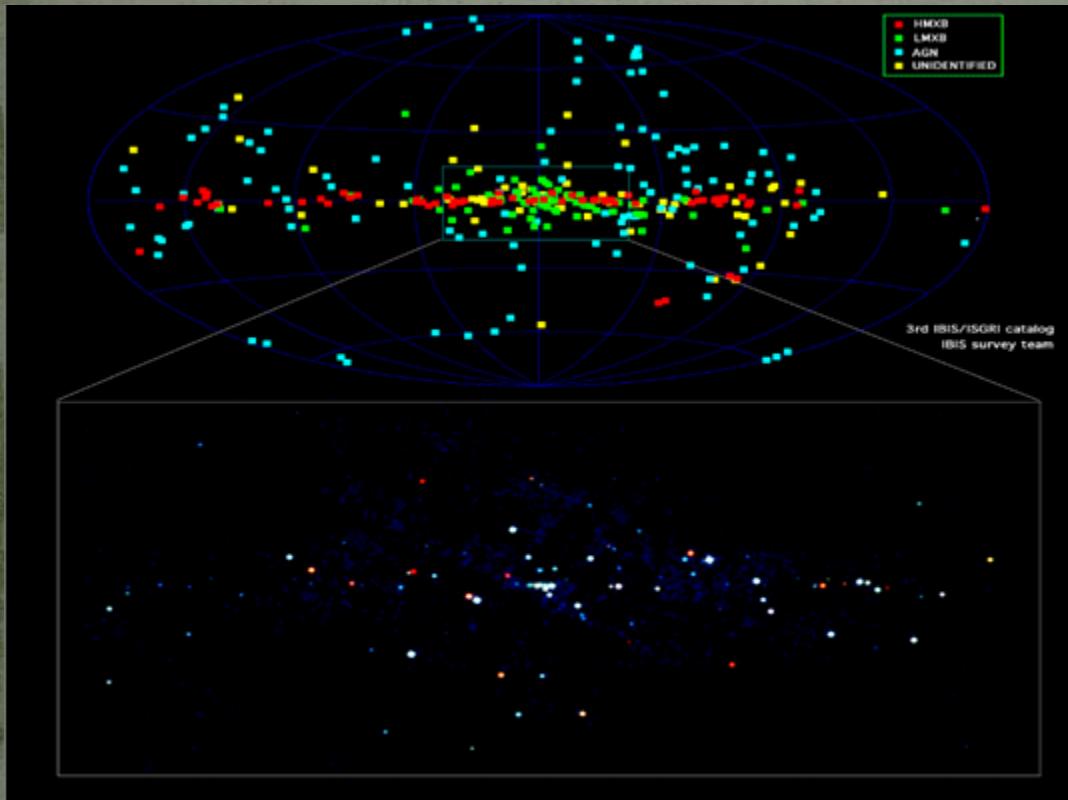

171 (> 60%) unidentified

Since the catalogue produced, > 40 more objects have been associated with a possible counterpart(s).

# 3rd INTEGRAL/IBIS survey

(Bird et al. 2007)

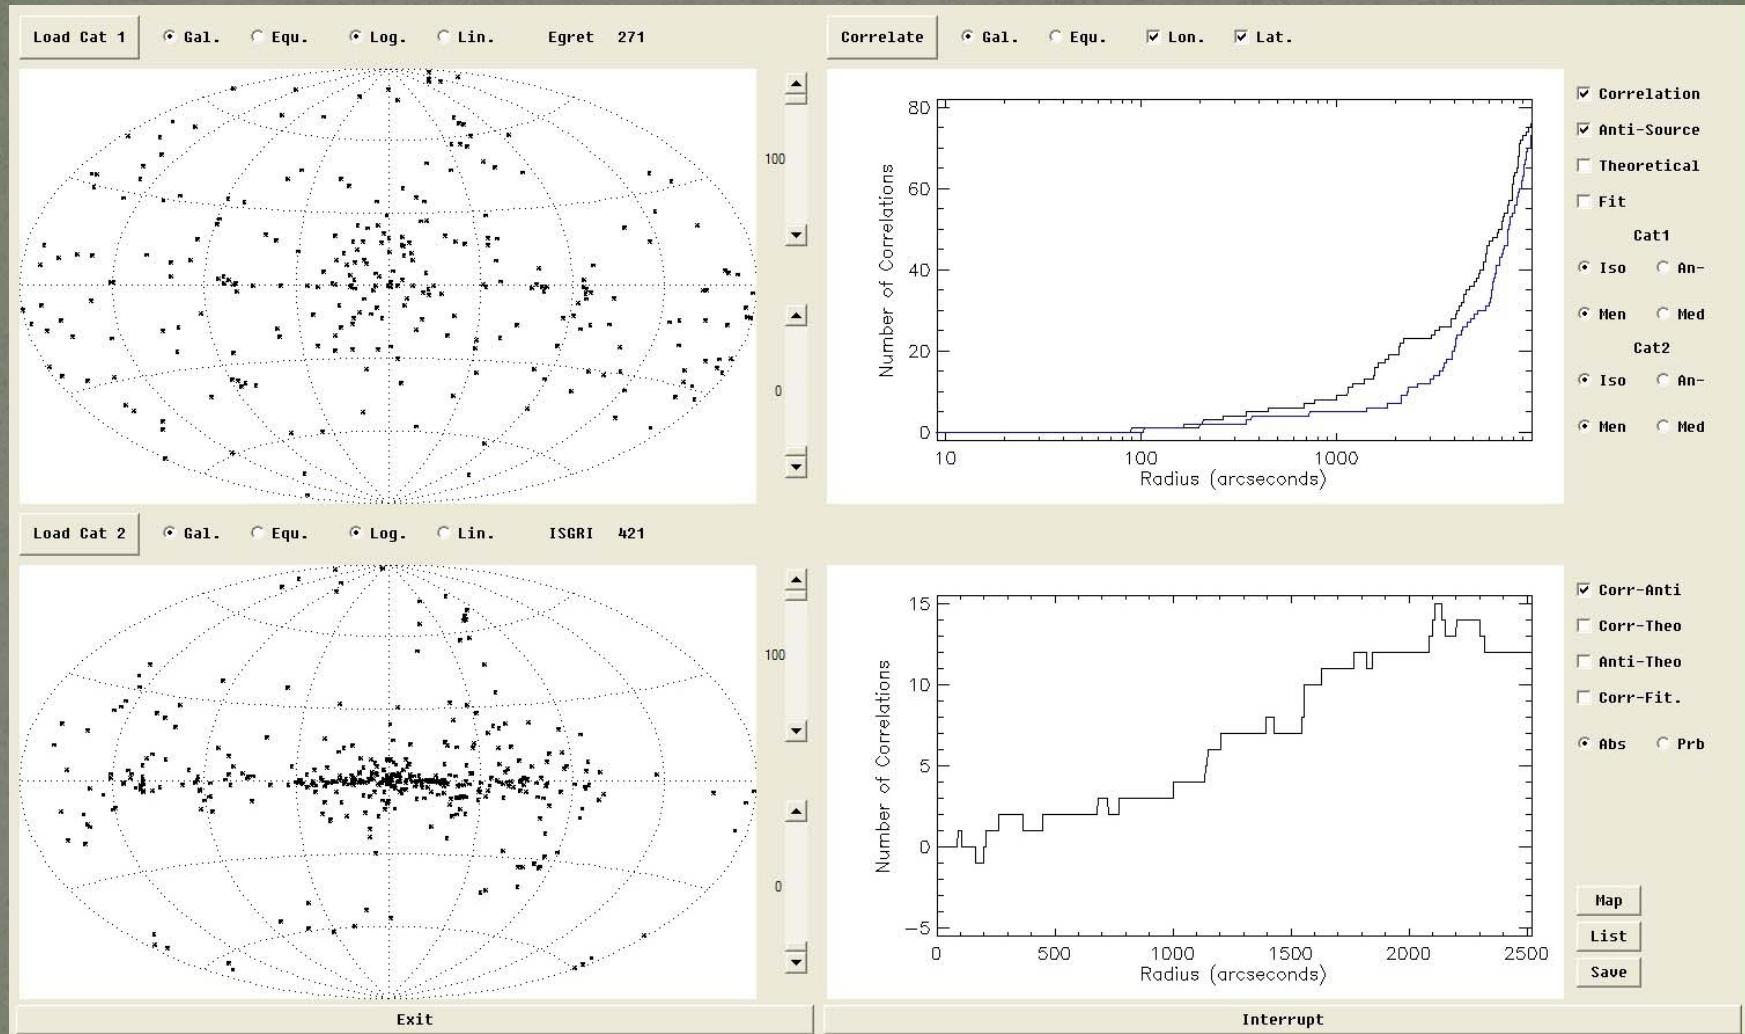

421 hard X-ray sources detected

- 118 AGNs (including blazars)
- 79 LMXBs
- 68 HMXBs
- 23 CVs and Symbiotic stars
- 12 Supernova products  
(isolated PSRs, PWNe, SNRs, AXPs)
- 2 Galaxy clusters
- 2 Soft Gamma Repeater (SGR)
- 1 Gamma-Ray Burst (GRB)
- 1 RS CVn (magnetic) star
- 115 unknown/unclassified sources  
(~27% of the sample)

Some associations with the EGRET catalogue likely

# IBIS (3rd Cat) versus EGRET (3rd Cat)

Total Correlations ~ 22 (to 0.7°) of which ~ 8 expected by chance

# IBIS (3rd Cat) versus EGRET (3rd Cat)

But remember most (~8 out of these 9 + 3 GC) are likely to be false associations according to the cross correlation analysis ... so which are the true ones?

## Possible IBIS/EGRET ASSOCIATION - 3

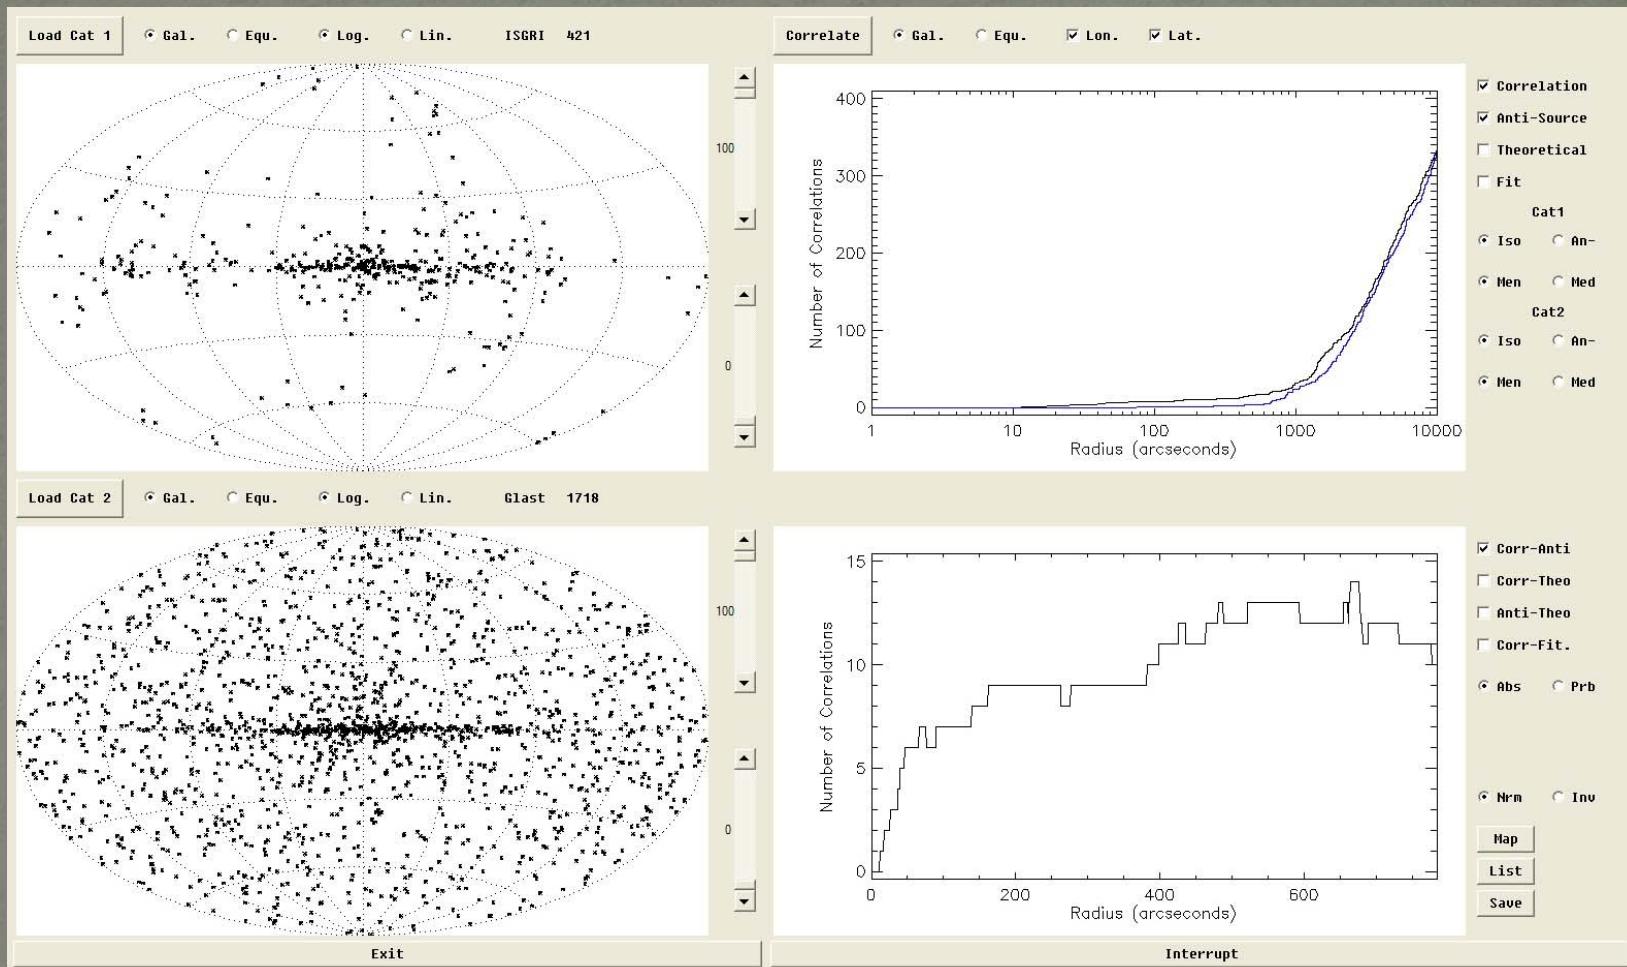

3EG J1744-0310 has been identified with the  $z=1.05$  QSO B1741-03  
but...variable new IBIS source in EGRET error box  
IGR J17426-0258 (still unidentified source detected in Rev 429 )

Which is the counterpart to this EGRET?

# Summary

- IBIS v Egret shows only weak correlation
  - 22 total associations
  - 8 chance superpositions
- 10 are almost certainly correct
  - Blazars
  - Pulsars
  - microquasars
- Chance probability of association very high
  - Only 4 out of 12 are probably correlated
  - Confirmation must rely on alternative information
- Large fraction of ISGRI sources are XB & Sey AGN
  - Unlikely to be counterparts
  - most blazars seen by ISGRI have possible associations
- Deeper INTEGRAL observations will lead to more constraints/associations

# IBIS (3rd Cat) versus GLAST DC2

**Surprise! ONLY ~ 17 total correlations, of which 7 (8, if uncertain included) in common with the EGRET correlation map**

# IBIS (3rd Cat) versus EGRET (3rd Cat) vs GLAST DC2

Distance ('")	IBIS-INTEGRAL Name	RA	Dec	GLAST DC2 Name
12	3C273	187.280	+02.049	J1229p0210
18	GRS1915+105	288.799	+10.944	Galactic_GRS19
26	NGC1275	049.953	+41.517	Cluster_Perseus
37	BL Lac	330.678	+42.288	J2202p4217
