INTEGRAL: lessons learned

Matthias Ehle*[1]

[1]European Space Astronomy Centre – Spain

Abstract

ESA expressed an interest in INTEGRAL's experience from which other missions can benefit. Both, lessons to be repeated and not to be repeated were collected from various stake holders and summarized by the Mission Manager and Project Scientist to ESA management. In this presentation, some examples are shared with the community. The overall conclusion by ESA management is that this last lessons-learned exercise showed interesting new aspects while it was also noticed that the general science operations concepts at ESA already carry a lot of INTEGRAL's signatures.
