Abstract

Since its launch in 2002, ESA's INTEGRAL mission has generated a substantial body of scientific papers. This report presents a statistical survey of INTEGRAL's refereed papers over the period 2003 to 2025, as available at the INTEGRAL ADS Llibrary (https://ui.adsabs.harvard.edu/public-libraries/nNnTKmc0RoCXZt_Pm3UesQ). We examinee different aspects of the publication trends over time, including annual output, citation impact, and paper distribution across the different mission's instruments.
